

Advanced Project Management with Process Improvement

Course Duration

80 hours +

Course Description

This course is an integration of the Project Management Professional and Lean Six Sigma Green Belt certification programs. This course focuses on enabling students to earn both certifications, enter the field of Project Management, and utilize proven project management methodologies on projects in any environment or industry. The course incorporates case studies to highlight the application of PM methodologies specific to various projects and language. The training is framed around the planning process to build upon familiar knowledge foundations for students.

The ultimate goals of this course are for students to gain both the PMP® and Lean Six Sigma Green Belt PM credentials, increase their competitiveness for Project Manager positions, and enhance their ability to positively impact their organizations by applying industry best practices to projects.

This course will equip students with the **3 Keys to Passing the PMP® Exam**:

1. In-depth understanding of Project Management concepts and exam terminology
2. Memorization of key concepts, terms, and formulas
3. Development of expert test-taking skills
4. DMAIC and Lean Six Sigma foundations
